

Path and Face Window

A draw is not a swing direction. It is a small, repeatable gap between face and path.

Problem

The ball starts left and keeps going left, or you lose the draw and it turns into a block.

Root cause

Too much of a good thing. A path of 2 to 4 degrees in to out with the face just inside it produces a draw. At 7 degrees the same face relationship produces a hook.

Face to path	Ball flight	Verdict
0 to 2 deg closed	Gentle draw	Target window
3 to 4 deg closed	Strong draw	Playable, watch the left side
5 deg or more closed	Hook	Face, not path, is the fix
Face open to path	Fade or slice	Check grip before path

Diagnose before you fix: the start line tells you the face, the curve tells you the gap between face and path. Ask which one moved before changing anything.
