

Dispersion Tracker

Ten shots, one club, one target. Mark where each one finished relative to the target line and whether you ran your setup check first. Patterns show up in ten shots. They do not show up in one.

Name _____ Date _____ Club _____

Target distance _____

Shot	Setup check done	Start line	Curve	Finished	Yards offline	Note
1						
2						
3						
4						
5						
6						
7						
8						
9						
10						

Start line
Left, straight, or right of the target line.
This is your face.

Curve
Draw, straight, or fade. This is the gap
between face and path.

Scoring
A point for every shot inside 15 yards of
the line. Seven out of ten is the
benchmark.

Session totals

Shots left	Shots straight	Shots right	Points out of 10	Compared to last session

What to do with it: bring this page to your next lesson. A mixed pattern, some left and some right with the same club, means the face is moving. A pattern that misses the same side every time means the path and the face are matched but aimed wrong. Those two problems have different fixes, and the sheet tells you which one you have.
